

# Writing Repeating Decimals as Fractions

In a previous tutorial, we explored solution paths for writing decimals as fractions.

In this tutorial, we'll explore solution paths for writing repeating decimals as fractions.

A student wrote the repeating decimal  $0.333\dots$  as the fraction  $\frac{1}{3}$ . Let's consider their solution path.

$$\begin{array}{r} 10x = 3.3333 \\ - \quad x = 0.3333 \\ \hline 9x = 3.0000 \\ \\ 9x = 3 \\ \hline x = \frac{3}{9} = \frac{1}{3} \end{array}$$

- How would I explain why the student begins their solution path by writing  $x = 0.3333$ ?

$$\begin{array}{r} 10x = 3.3333 \\ - \quad x = 0.3333 \\ \hline 9x = 3.0000 \\ \\ 9x = 3 \\ \hline x = \frac{3}{9} = \frac{1}{3} \end{array}$$

- Why is the student now writing  $10x = 3.3333$ ? How would I explain my thinking in performing this step?

$$\begin{array}{r} 10x = 3.3333 \\ - \quad x = 0.3333 \\ \hline 9x = 3.0000 \\ \\ 9x = 3 \\ \hline x = \frac{3}{9} = \frac{1}{3} \end{array}$$

- How would I determine the power of 10 required in performing this multiplication step?

$$10x = 3.3333$$

$$10 \times x = 0.3333 \times 10$$

$$9x = 3.0000$$

$$\frac{9x}{9} = \frac{3}{9}$$

$$x = \frac{3}{9} = \frac{1}{3}$$

- What am I trying to accomplish by writing the two equations?

$$10x = 3.3333$$

$$- \quad x = 0.3333$$

$$9x = 3.0000$$

$$\frac{9x}{9} = \frac{3}{9}$$

$$x = \frac{3}{9} = \frac{1}{3}$$

- How would I explain the math being performed at this step?

$$10x = 3.3333$$

$$- \quad x = 0.3333$$

$$9x = 3.0000$$

$$\frac{9x}{9} = \frac{3}{9}$$

$$x = \frac{3}{9} = \frac{1}{3}$$

- How would I explain the calculation being performed in this final step of the solution path?
- How would I explain and demonstrate writing a fraction in lowest terms?

$$\begin{array}{r} 10x = 3.3333 \\ - \quad x = 0.3333 \\ \hline 9x = 3.0000 \\ \\ 9x = 3 \\ \hline x = \frac{3}{9} = \frac{1}{3} \end{array}$$

Let's review this solution approach using another example.

Write the repeating decimal 0.090909... as a fraction in simplest form or lowest terms.

## Writing Repeating Decimals as Fractions-Skills Checklist

- I can write a repeating decimal in an equation
- I can write a second equation that contains my repeating decimal multiplied by a power of 10
- I can explain and demonstrate how I determine which power of 10 I use to write my second equation
- I can demonstrate how I remove any repeating digits using subtraction
- I can explain and demonstrate how I isolate a variable by performing the inverse operation
- I can explain and demonstrate how I write a fraction in lowest terms
